

① what is HTML.

HTML stands for Hyper Text Markup language.

- HTML is the standard markup language for creating web pages. HTML describes the structure of a web page.
- It is the most basic building block of web. It defines the meaning & structure of web content.
- HTML is the standard document format for web pages which is supported by all browsers. They take HTML content & translate it into what you see on your device screen.

② why do we use HTML?

- structuring web pages with tags & elements. we can define the headings, paragraphs, & other content of a web page.
- Navigating the internet. Navigating the internet would be much harder without HTML.
- Embedding images & videos.
- improving client-side data storage & offline capabilities.
- it is also used for game development.
- when you visit a web page, its server sends its HTML file to your browser. Your browser then sends the HTML to the browser & displays it. Some web applications don't use static HTML. But generate it in response to specific actions on their servers.

③ explain types of tags.

HTML tags are like keywords which define what how web browser will format & display the content. with its help we can distinguish between an HTML content & simple content.

- All HTML tags enclosed with <>.
- Every tag in HTML performs different tasks.
- If you have used an open tag, you must use a close tag.

Examples:

- <tag> content </tag>
- <p> paragraph tag </p>
- <h2> heading tag </h2>
- bold tag

enclosed tag

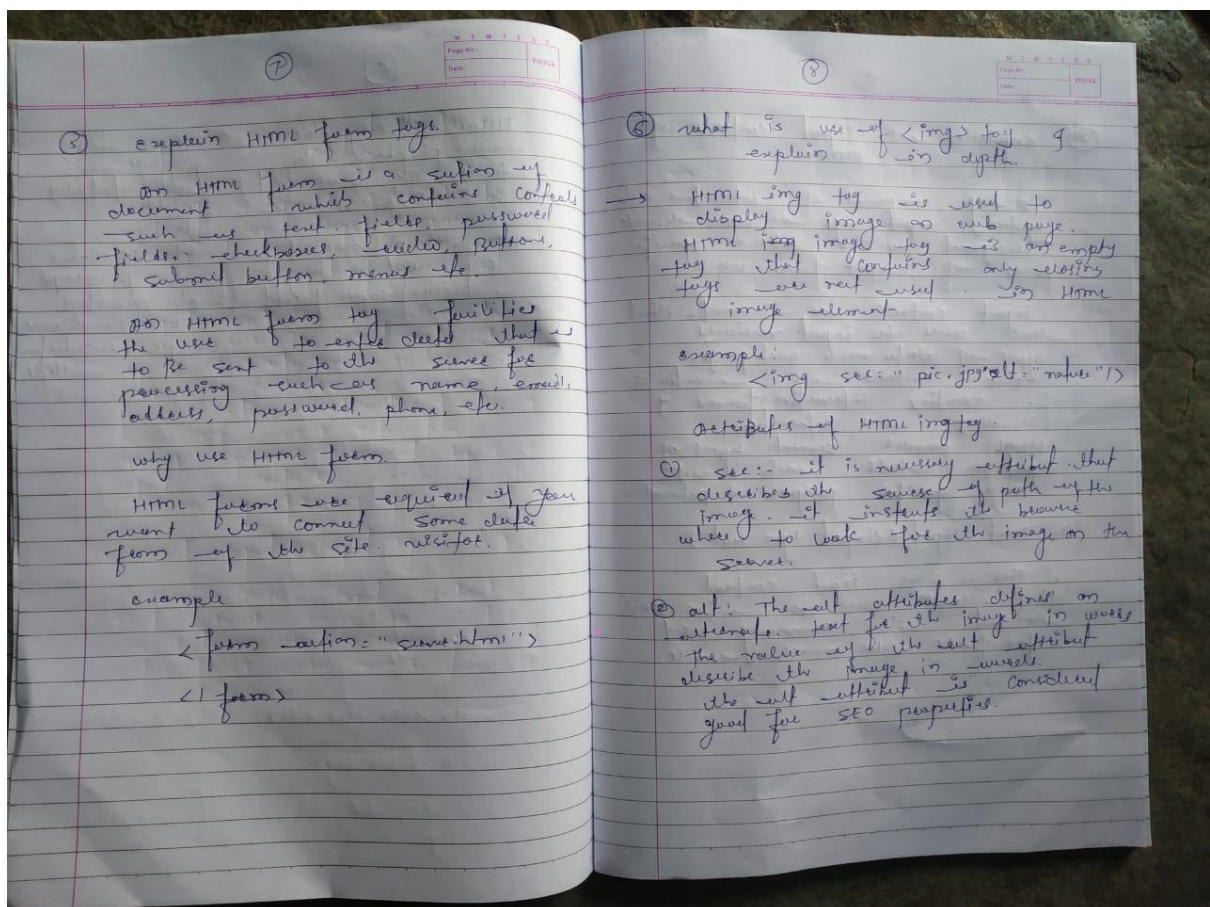

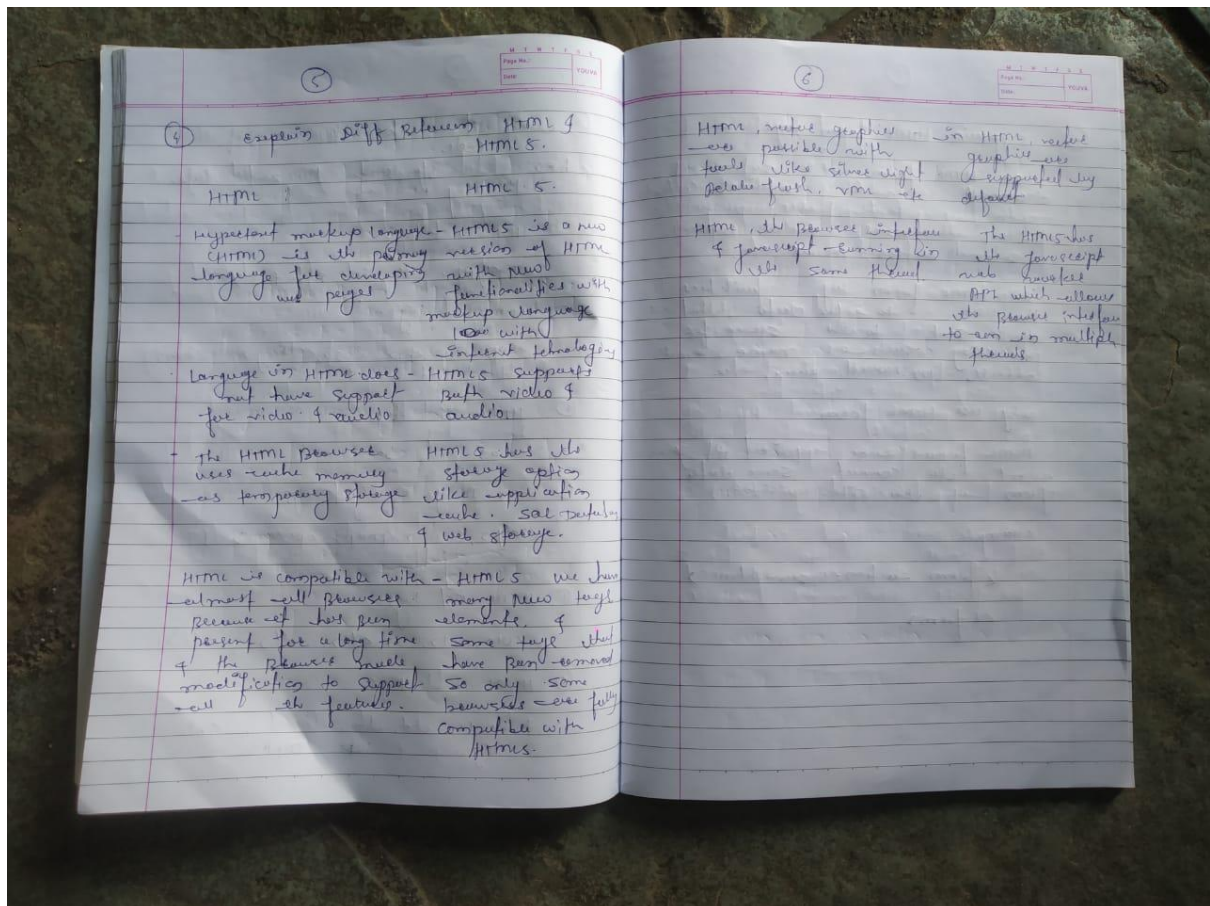

Some HTML tags are not closed for example: br & hr

 tag: br stands for break

④ line, it breaks the line of the code.

: It stands for horizontal rule. This tag is

- ① HTML meta tags
 - doctype, title, link, meta, style.
